# ChronosHub

Submissions & Publishing Portal

ALPSP webinar
January 29, 2025

We're
ChronosHub

ChronosHub is a workflow platform for publishers,

institutions, and funders whose common goal is to make the publishing
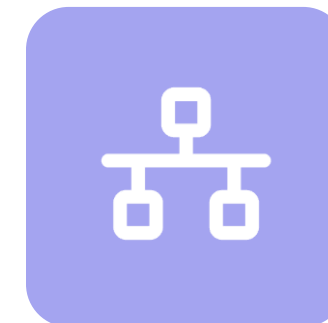

experience easier for all users.

We guarantee an outstanding user experience

Innovative design

The platform boasts a modern and intuitive design, making it easy for users. Based on design expertise and extensive user testing, our UX team works hard to balance visual cues and minimal text.

Unified user journey

The dashboard serves as a one-stop shop for users regardless of where they are in the publishing process. Through smart integrations with your partners and publishing systems, we provide a unified user journey.

What you need, when you need it

Users are presented with relevant information, when they need it, taking into account user attributes like funder, institution, and business logic. We do as much as possible upfront on behalf of the author to make all actions as simple as possible.

What sets ChronosHub apart from other solutions is that we allow you to provide your users—authors, editors, and reviewers—with an outstanding experience.
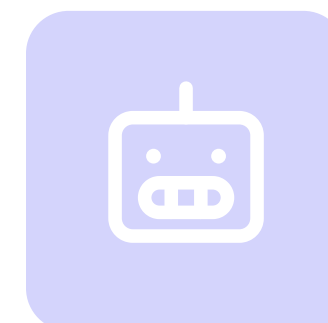

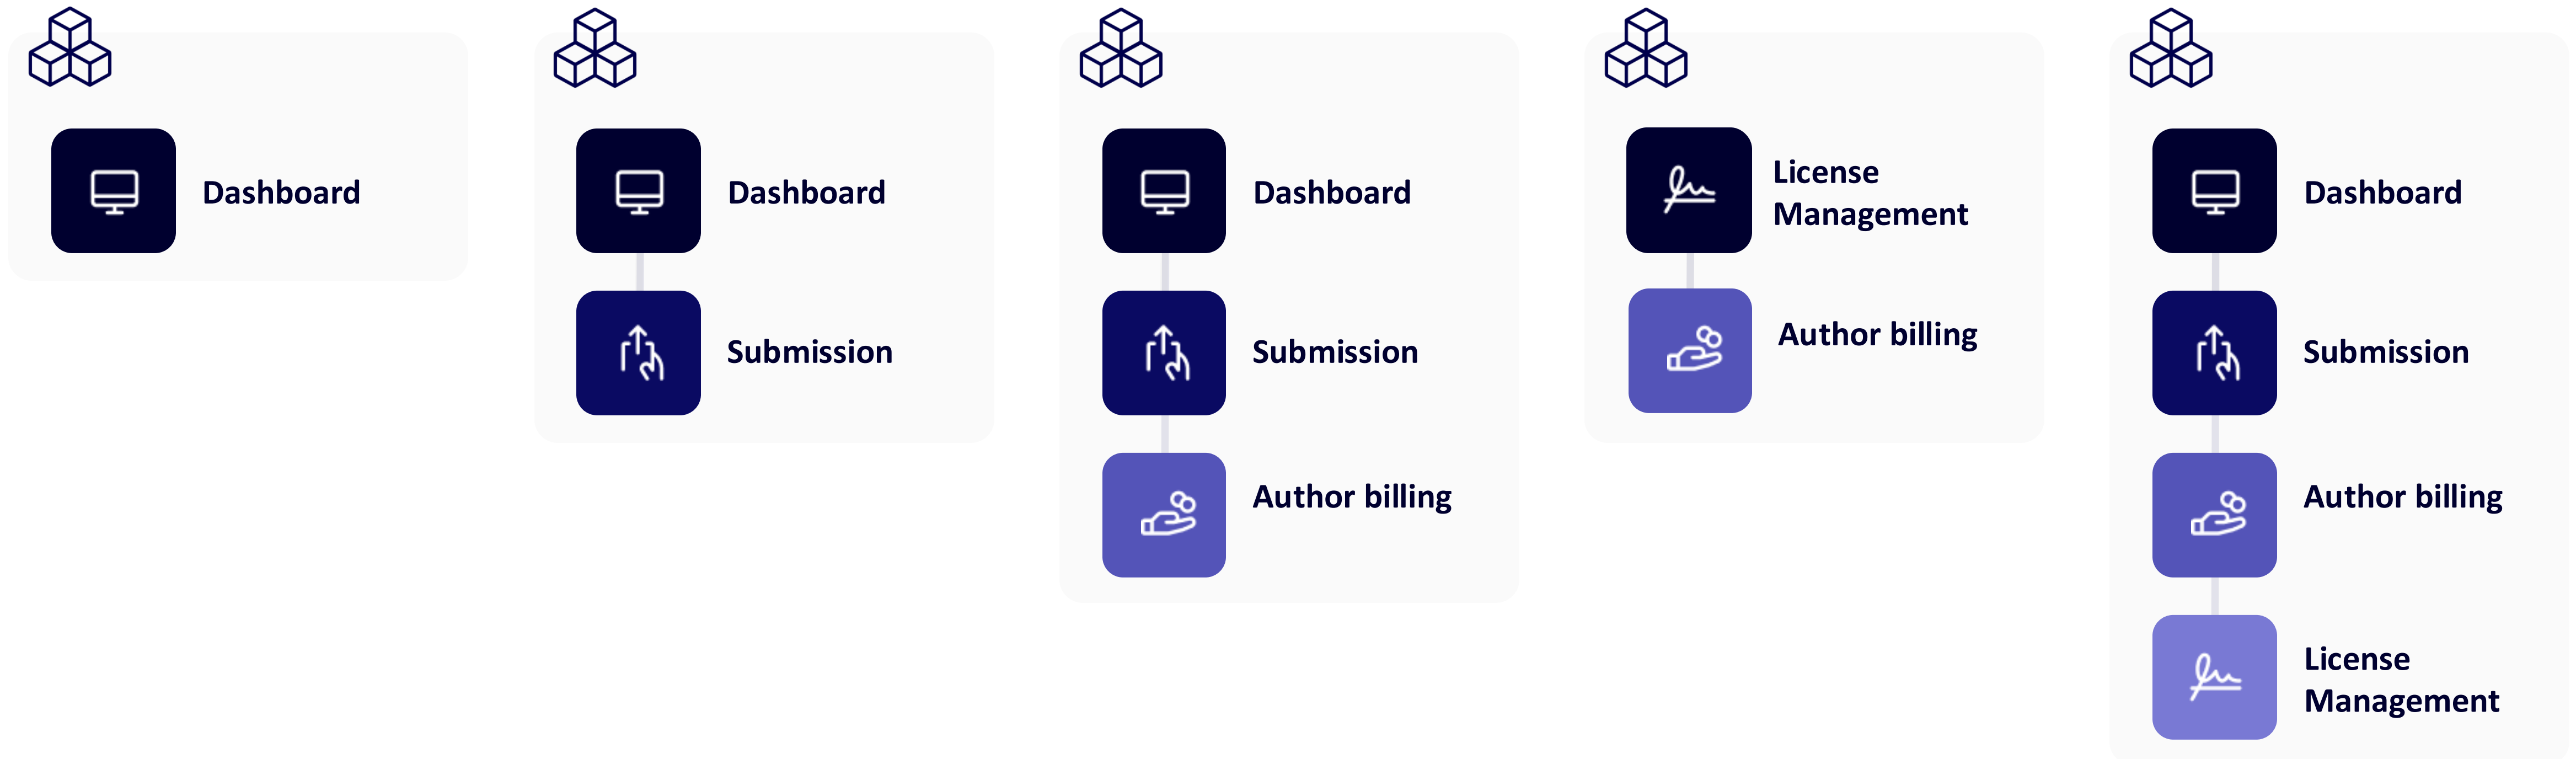

ChronosHub modules for publishers

You can select each of the modules on their own, or in combination with other modules, as shown in the examples below.

The Author Dashboard is complimentary if you pick the Submissions module.

What you've seen is only the beginning

We're constantly working towards these **goals** to ensure we deliver continuous value to your organization.

Faster submissions for authors through metadata extraction and identifier verification.
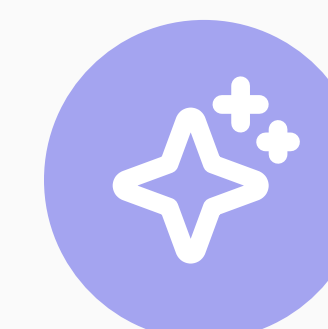

Less queries from authors during the process as our dashboard provides clarify over where in the process articles are, so there is less concern for questions.

Better identifier matching to reduce issues and queries around open access agreement eligibility. ChronosHub's matching of authors' listed institutions to known identifiers is currently more than 90%.

Continuous focus on faster turn-around times even though an authors only spends 2 and a half minutes – on average – making their publishing choice and sign their license, we aim to reduce it even further.

Deliver frictionless experience for users, ensuring seamless interactions and maximizing overall satisfaction.
